1 CONCEPTION OF THE ANALYSIS

1.1 RESEARCH CONTEXT

The media analysis of the 2008 national elections is part of the national research network AUTNES (Austrian National Election Study), funded by the Austrian Science Fund (FWF). The focus of the project “Mass Media Coverage and Effects“ (Project Number: S10904-G11; Principal Investigator: Günther Lengauer, University of Innsbruck) is on the investigation of mass-mediated politics in the 2008 Austrian election campaign. More precisely, the media analysis examines media content and effects and the role of mass media in portraying, reflecting and (re)framing the election campaign.

1.2 OBJECT OF STUDY

The object of study is defined as the coverage of Austrian federal politics – with or without explicit reference to the election. Hence, a report requires a substantial reference to federal politics (domestic or foreign) to be selected for this analysis. Reports concerning regional or local politics (federal province, district, or community level) are not covered by this investigation.

Austrian federal politics is defined as those fields of polity, politics, and policy topics which are described in the topic catalogue (Appendix A) in detail and in the overview below.

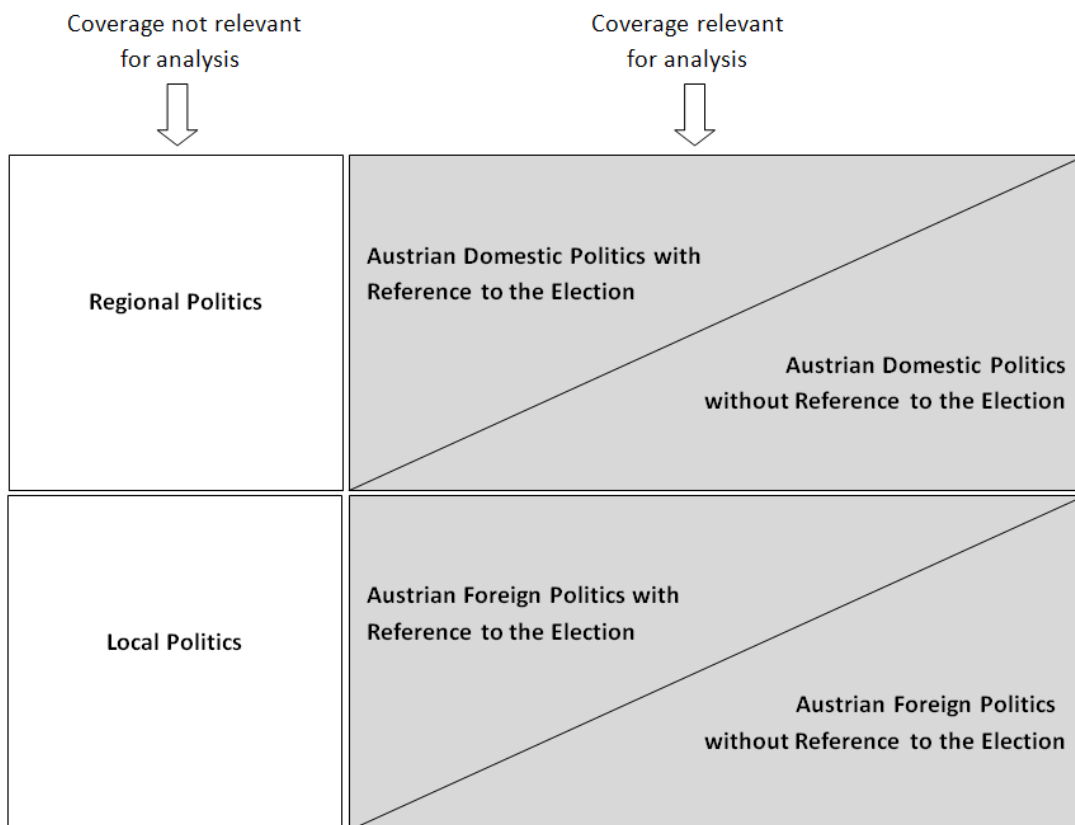

In the selection process, no sectional restrictions were applied. This means, reports that are bound to politics, but were published in the economy, sports, culture or communication section are also covered by this analysis.

Overview of the Main Topics Relevant for Analysis

- Policy Issues
 - Economic Policy
 - Financial Policy
 - Security Policy
 - Foreign Policy
 - European Policy
 - Defense Policy
 - Infrastructural Policy
 - Educational Policy
 - Social Policy
 - Sociopolitical Issues
 - Migration Policy
 - Cultural and Media Policy
 - Environmental Policy
 - Sports and Leisure Time Policy
- Process Oriented Topics
- Structural and Cultural Topics

- Election Related Topics
- Campaign Related Topics
- Non Political Topics
- Personality Profiles
- Party Profiles

Figure 1: Object of Study

1.3 PERIOD UNDER INVESTIGATION

The period under investigation covers the final six weeks of the 2008 Austrian election campaign.

For newspapers: Monday, August 18 to Election Day, Sunday, September 28 (42 Days)

For TV newscasts: Sunday, August 17 to Saturday, September 27 (42 Days)

1.4 MEDIA SELECTION

The media sample consists of six national newspapers with the highest circulation and the two TV main evening newscasts with the highest viewership in the public (ORF Zeit im Bild) and private sector (ATV Aktuell).

Newspapers:

- Neue Kronen Zeitung (tabloid)
- Kleine Zeitung (tabloid)
- Kurier (broadsheet)
- Österreich (tabloid)
- Der Standard (broadsheet)
- Die Presse (broadsheet)

TV newscasts:

- Zeit im Bild 19:30 Uhr (public service TV)
- ATV Aktuell 19:20 Uhr (private TV)

1.5 BASIC POPULATION

All media reports which were published in the period under investigation and selected according to the criteria specified above are covered by this investigation. Advertisements and PR texts are not part of the analysis.

The analysis is designed as a *real format* investigation. This means newspaper articles are collected as pdf files and TV news segments are recorded as video files. This procedure has two advantages. First, the coding is based on the same documents available to the media users. Second, textual, auditive as well as visual elements can be covered by the analysis.

1.6 CONTEXT UNIT, UNIT OF ANALYSIS AND CODING UNIT

The whole media report including all textual, auditive and visual elements (photos, info charts and other visualizations) is the recording unit and the unit of analysis. Context-related interpretations that exceed the framework of the single media report are not part of the coding decisions.

Thus, the single report is the relevant context unit (unit for the semantic explication of the coding unit), the primary unit of analysis (unit about which statements should be made) as well as the primary coding unit (unit whose characteristics are recorded).

1.7 SELECTION OF THE SOURCE MATERIAL

The formal identification of a news item is conducted as followed: A news item has to be self-contained. A report in a different form of presentation about the same topic counts as a new piece. Thus, news reports, commentaries or interviews about the same topic are judged as independent reports. The same holds true for different presentation styles of TV news items (e.g. interviews). Anchor reports are regarded as integral parts of a report and not as separate media reports. In principal, media reports have an author's signature and include a headline, a title or an anchor report.

Reports or news in brief with distinct headlines that are published in overviews and columns of short news (see Figure 2) are classified as separate media reports. This applies to news flashes on TV as well.

Figure 2: Example – Boundaries of Media Reports

Each item in this column of short news is a discrete report as they show individual headlines.

These sections do not have distinct headlines and therefore they count as one single media report.

SP-Broukal empört über steirische Uni-Rektoren

Die Rektoren der steirischen Unis warnen vor einer Abschaffung der Studiengebühren. Der Rektor der TU Graz, Hans Stöckel, forderte sogar, die Gebühren anzuhäufen. Der Furor von SPÖ-Wissenschaftssprecher Josef Broukal ließ nicht lange auf sich warten. „Informieren Sie sich doch, meine Herren“, erklärte Broukal via Aussendung. Er verwies u. a. darauf, dass die abgeschafften Uni-Gebühren den Unis voll ersetzt werden sollen.

VP-Fuhrmann über ‚Budgetroulette‘ entsetzt

„Budgetroulette auf Kosten der Jungen“, ortete ÖVP-Jugendsprecherin Silvia Fuhrmann angesichts der jüngsten Plenarsitzung im Parlament auf Öi. Sie lehnt die Abschaffung der Uni-Gebühren ab.

SPÖ: Kärntner Modellland sei „oranges Mogelland“

Das „ständige Schönfärben der Wirtschaftssituation in Kärnten“ durch Haider krisierte SPÖ-Landesgeschäftsführer Gerald Passegger via Aussendung. Kärnten sei kein „oranges Modellland“, sondern ein „oranges Mogelland“.

Bundespräsident Fischer für EU-Beitritt Kroatiens

Für einen EU-Beitritt Kroatiens hat sich Bundespräsident Heinz Fischer bei seiner Ansprache anlässlich der Klagenfurter Herbstmesse ausgesprochen. Wenn alle Bedingungen erfüllt seien, stehe er einer Mitgliedschaft Kroatiens positiv gegenüber.

KURZ GEMELDET

Strache behauptet, von Stadler erpresst worden zu sein

Wien - Der Dauerkonflikt zwischen FPÖ und BZÖ geht weiter. FPÖ-Chef Heinz-Christian Strache hat laut *Kleiner Zeitung* dem früheren Parteifreund und nunmehrigen BZÖ-Listenvertreten Ewald Stadler Erpressung und Nötigung vorgeworfen. Wenn er, Strache, nicht eine Millionenförderung für das freiwillige Bildungswerk, dessen Chef Stadler war, unterschreibe, „wird er behaupten, dass ich homosexuell bin. Sex mit Minderjährigen habe“, erklärte der FPÖ-Chef bei einer Veranstaltung. Er habe sich aber nicht erpressen lassen und alle Vorwürfe von einem Notar festhalten lassen. Stadler demonstrierte und sprach von einer „Wahlkampftaktik im Sinne einer Milieidtour“ von Strache. (APA)

Umfrage zeigt Ablehnung einer Neuaufgabe von Rot-Schwarz

Linz - Die Österreicher verspüren eine tiefe Abneigung gegen eine Neuaufgabe der großen Koalition von SPÖ und ÖVP. Zugleich hält eine Mehrheit der Bevölkerung die Ausgrenzung von FPÖ und BZÖ für falsch. Das ergab eine Umfrage des Linzer Meinungsforschungsinstitutes Imas. Bei der Frage, ob die fünf bisher nicht im Parlament vertretenen bundesweiten Mitbewerber eine Rolle bei der Regierungsbildung spielen könnten, vorweisen die Meinungsforscher auf Umfragenden, wonach sie im Zuge der harten Auseinandersetzung zwischen den etablierten Parteien an den Rand der Bedeutungslosigkeit gedrängt worden seien. (APA)

Gull und „Krone“: Wilder Westen und Faustrecht

Wien - „Wir sind im Wilden Westen angekommen, und dort herrscht das Faustrecht!“, kritisiert Markus Gull, Kampagnenleiter der ÖVP-Wahlwerbung, im Rahmen einer Podiumsdiskussion warf er am Freitag der *Kronen Zeitung* vor, im aktuellen Wahlkampf eine „Pro-SPÖ-Kampagne“ zu betreiben. SPÖ-Werber Mariusz Jan Demmer sah die Sache naturgemäß anders und verwies darauf, dass es für eine Partei „völlig legal“ sei, sich darum zu bemühen, in „breiten Medien“ wie der *Krone* präsent zu sein. „Das tun die anderen auch.“ (tsch)

Steirischer Landtag schafft Sozialhilfe-Regress zur Gänze ab

Grätz - In der Steiermark müssen Bedürftige und ihre Angehörigen ab 1. November keine Rückzahlungen der Sozialhilfe mehr leisten, wenn sich ihre wirtschaftliche Lage verbessert. Das wurde am Freitag im Sozial-Unterausschuss des Landtags mit den Stimmen von Grünen, KPÖ und SPÖ beschlossen. Betroffenen soll so einerseits die Angst genommen werden, auf das Sozialamt zu gehen. Zudem sollen sie motiviert werden, „wieder in den Erwerbsmarkt zurückzukommen“, so Grünen-Abgeordnete Edith Zitz. (cms)

WAHLKAMPF TAGEBUCH
NOCH 9 TAGE

Im Epizentrum des roten Wien: Faymann

Deutsche Schützenhilfe

Merkel und van der Leyen bei Molterer / Faymanns Frau als Wahlkämpferin im roten Wien.

Wien, machte gestern der SPÖ-Chef Station. Mit dabei seine Frau **Martina Ludwig-Faymann**, die auch in den nächsten Tagen dort anzutreffen sein wird: als Wahlkämpferin an einem SPÖ-Stand. Ludwig-Faymann ist SPÖ-Gemeinderätin.

Wien, machte gestern der SPÖ-Chef Station. Mit dabei seine Frau **Martina Ludwig-Faymann**, die auch in den nächsten Tagen dort anzutreffen sein wird: als Wahlkämpferin an einem SPÖ-Stand. Ludwig-Faymann ist SPÖ-Gemeinderätin.

Grüne gegen Liberale, das ist Brutalität. Im Zuge des Wahlkampfs sind jetzt schon bekannte Spekulationen aufgetaucht, wonach Liberalenchef **Alexander Zach** als Eurofighter-Lobbyist tätig gewesen ist. Hintergrund der jetzt aufgetauchten Vorwürfe: Wegen des Antritts der Liberalen treten die Grünen derzeit in allen Umfragen auf der Stelle.

Wie gestern berichtet, wirbt die „Sekretärin und Allein-erzieherin“ **Sophie Andics** in Inseraten für Faymann. Im Büro von SPÖ-Kanzler **Alfred Gusenbauer** legt man Wert auf die Feststellung, dass Andics seit August nicht mehr dort arbeite.

Michaël Jungwirth, Eva Weissenberger

So called information boxes (figures, statistics, separate text blocks), which can obviously be identified as part of a media report (as additional background information etc.), do not count as separate media reports but are rather treated as an integral part of the superior report.

Figure 3: Example of an Information Box

„Das ist Wachteleierpolitik!“

INTERVIEW. ÖVP-Minister Hahn fragt sich, ob demnächst auch die Noten abgeschafft werden.

VON MARTINA SALOMON

Die Presse: Was können Sie tun, außer schreckenstarr zuzusehen, wie das Parlament unter anderem die Studiengebühr gegen Ihren Willen abschafft?

Johannes Hahn: Ich hoffe immer noch, dass Vernunft einkehrt. Alles, was da bisher auf dem Tisch liegt, ist unsinnig. Ausgerechnet die SPÖ verabschiedet sich vom Ziel, mehr Geld für den tertiären Bereich auszugeben. Wenn jetzt den Universitäten Geld entzogen wird und gleichzeitig vollmündig angekündigt wird, dass man das ausgleicht, dann wird man irgendwann draufkommen, dass das Budget auch nicht uferlos ist. Die Abschaffung der Studiengebühr kostet 150 Millionen Euro im Jahr – Tendenz zunehmend, weil die Studentenzahlen ja steigen.

In Diskussion ist auch, dass Bunkelstudien zahlen. Wie kann das administrativ funktionieren?

Hahn: Ein Rektor hat mir erzählt, dass er dafür an seiner Universität 20 Verwaltungsmitarbeiter mehr bräuchte. Schließlich muss ja dann jeder einzelne Student auf seine Lebensgewohnheiten hin überprüft werden: wie intensiv er beruflich arbeitet, ob er hinreichend studiert. Man weiß auch nicht: Muss er die Beiträge vorher zahlen, oder wird er rückwirkend zur Kassa gebeten? Und wird die Universität jetzt zum Inkassobüro? Willkommen in der Wirklichkeit!

Die SPÖ verabschiedete sich vom Ziel, mehr Geld für die Universitäten auszugeben, kritisiert Johannes Hahn. (Clarens Fabry)

Auch die Zugangsbeschränkungen bei Publizistik, Psychologie und Betriebswirtschaft sollen fallen.

Hahn: Das ist der nächste Schwachsinn! Das wird dazu führen, dass jene, die es sich leisten können, ins Ausland gehen, wo die Studienbedingungen besser sind. Wo ist da die soziale Symmetrie? Außerdem werden wir noch attraktiver für Deutsche. Kein Numerus clausus, keine Studiengebühren: Schlaraffenland! Als Nächstes erwarte ich die Abschaffung der Noten und die Befreiung von der Matura als Zugangsvoraussetzung. Man muss schon konsequent sein, wenn man blöd ist!

Was halten Sie von der ebenfalls im Raum stehenden Erhöhung der

Zahl der Medizin-Studienplätze?

Hahn: Das ist absurd. Jetzt, wo wir es endlich geschafft haben, die Wartezeit auf Praktikumsplätze zu verkürzen!

Aber der ÖVP sind die Hände gebunden. Sie werden am 24. September überstimmt – und aus.

Hahn: Ich kann nur hoffen, dass es bis zur Abstimmung in den Fraktionen noch ein paar normal Tickende gibt, und dass auch beide Gehirnlappen gleichzeitig zum Einsatz kommen. Auch eine Form der Symmetrie!

Kann gut sein, dass die Gebühren jetzt abgeschafft, aber von der neuen Regierung wieder eingeführt werden, oder?

Hahn: Das ist Wachteleierpolitik! Aber die SPÖ kann das ja alles den Josef Broukal fordern lassen, weil der ist in der nächsten Legislaturperiode eh nicht mehr im Nationalrat. Später können die Sozialdemokraten dann behaupten: „Das war alles der böse Broukal.“

ZUR PERSON

■ **Johannes Hahn** (50) ist seit 2007 Wissenschaftsminister. ÖVP-Wien-Chef ist er geblieben.

■ Mit „Wachteleierpolitik“ spielt er auf die geplanten Ausnahmen für Luxusgüter – darunter Wachteleier – bei der Mehrwertsteuersenkung an.

Teasers and Trailers (Headlines of the Day):

Teasers are short articles on the front page of a newspaper which refer to the comprehensive sequel of the article inside the paper. Such teasers are classified as independent reporting units. The same holds true for the trailers of TV newscasts (headline overview of the day). Table of contents (horoscope S. 17, TV guides, etc.) or program announcements on TV are not relevant for coding.

Figure 4: Reports not Relevant for Coding

Tables of content and TV guides are not relevant for coding.

Selection Criteria:

In order to determine the relevance of each media report for our analysis, the reference to Austrian federal politics has to be identifiable in the headline or the lead of a newspaper article and in the introduction by the reporter on TV, respectively. If the relevance is not identifiable in these sections of the text, the report is not selected and therefore not part of the analysis. Exceptions are reports without headline, lead or introduction. In these cases, the whole text is the basis for the decision whether a content-related reference to Austrian federal politics exists or not. The relevant fields of topics concerning Austrian federal politics (domestic and foreign policy) are recorded in the detailed Main Topic Catalogue (see Appendix A of the Codebook).

1.8 DETAILED POPULATION OF THE RELEVANT MEDIA REPORTS

Over the whole period under investigation, 6,506 media reports in the analyzed media outlets meet the relevance- and selection criteria for the media analysis of the 2008 Austrian election campaign. 6,111 reports were published in the six newspapers and 395 broadcasted on TV newscasts.

¹ The quality papers „Der Standard“ and „Die Presse“ do not offer Sunday issues and therefore are only published six times a week.

1.9 CONDUCT OF CODING

The coding was conducted in a rotative manner by ten coders over a period of twelve months (June 2010 to June 2011). The newspaper reports were coded by all ten coders, the TV reports by six coders. To minimize a structural, person-related bias of the coding results, the media outlets and the days of analysis were evenly allocated to the coders. Thus, every coder was assigned a maximum of 15 and a minimum of 5 percent of the population of the media reports. The same limits were applied to each media outlet and each week under investigation. Because the coding of TV news items was conducted by only six coders, these limits were extended to 15 and 30 percent per newscast and week to achieve an even share of news items of the same news outlet and date among coders. Such a procedure minimizes the potential bias of the results caused by coder idiosyncrasies.

4.1 THE TESTING PROCEDURE

The quality and applicability of the coding scheme is tested by a series of pre- and retesting procedures. The testing procedure consists of two levels. On the one hand, the validity of the coding is measured. Thereby, the coding of team is compared to the coding of the principal investigator to capture the concordance of the coding concept applied by them. By so doing, the question whether the coding scheme measures what it was meant to measure can be answered. On the other hand, the inter-coder reliability is captured. This measure captures the pairwise concordance among coders. Holsti's reliability coefficient was applied to measure both validity and reliability, as this measure is applicable for both testing procedures and can be applied for all scales of measure. Additionally, Holsti can be applied to random-based testing procedures. In both tests, the analysis aimed for a threshold of 0,700 (Holsti): Additionally, it was decided to only proceed with the coding if at least 95 percent of all variables exceed the threshold of validity and reliability. These minimum requirements are valid for both pre- and retests (see below). All variables which do not exceed the threshold in the two testing procedures are marked as such or were rather aggregated to a higher level (e.g. the topic categories and issue references). This procedure ensures analytical applicability.

4.1.1 Quality Management I - Pretests

In order to test the codebook, the researchers conducted sample coding. Thereafter, the codebook was adjusted accordingly and the coder training round 1 took place. This training session lasted several days. When the pretests attained satisfying validity and reliability results (≥ 0.700 Holsti) for more than 95% of the variables in both testing procedures, the coding of the investigation material started. In order to maximize the successful implementation of the concept and the conformities of the coding, the pretests were conducted in two waves. The second training round took place after the first pretest and the third training round was scheduled after the second pretest.

4.1.2 Quality Management II - Retests

In order to control the stability of the validity and reliability, two retests took place in the course of the coding. Retest 1 was accomplished individually by each coder after he or she reached the one-third-mark of the whole coding. Consequently, Retest 2 was conducted after each coder reached the two-third-mark of the individual coding workload. Such a retesting procedure allows controlling for the quality of the coding as well as for eventually occurring changes in the individual understanding of the coding concepts over time.

In total, five coder training rounds were conducted – three of them before the start of the coding in the course of the two-step pretest phase and two individual training and discussion rounds after the respective retests.

In total, seventy randomly selected media reports drawn from all relevant news outlets and all journalistic styles were considered by the testing procedure. This corresponds to a sum of about 92,400 coding decisions that tested before and during the coding process.

4.2 RESULTS OF THE RELIABILITY AND VALIDITY TESTS

The following results of the validity and reliability tests show Holsti coefficients. The unadjusted intercoder reliability coefficients range from 0.66 to 0.99 and the adjusted values from 0.69 to 0.99.² The adjusted and unadjusted results for the validity range from 0.75 to 0.99. Additionally, mean values for the results of the validity and reliability tests were calculated: The average unadjusted intercoder reliability amounts to 0.87 and the average adjusted reliability results in a score of 0.87. For the validity (both for the unadjusted and the adjusted) an average value of 0.90 was calculated. The lowest validity and reliability scores concern the variable “main topic”. This can be mainly explained by the multilevel-conception and the huge number of categories and sub-categories in the topic catalogue (see Appendix A in the Codebook of the study). For improving the quality, the coding of this variable was subsequently aggregated to a smaller number of categories. Correspondingly, the validity and reliability measures were recalculated accordingly.

Example of the Subsequent Aggregation of Main Topics:

ORIGINAL CODING (original, unadjusted):

1610 Tax Reform (in general)
1620 Taxation of the Middle Class
1630 Taxation of Small and Middle Income
1640 Types of Taxes
1650 Value-added Tax on Food
1660 Value-added Tax on Medication

COMPRESSING
(aggregated, adjusted):

1600 Taxes

Due to the aggregation, satisfying validity and reliability scores were achieved (see detailed results of the testing procedures below). This allows an uncritical analytical usage of these variables (main topic, issue reference).

² Unadjusted reliability and validity data refer to the originally coded variables. Subsequent aggregation of the main topic and the issue reference variables result in new validity and reliability data (adjusted).

4.2.1 Overview of Testing Results

Average Reliability (total) ¹	0.87
Range of Reliability (unadjusted)	0.66 - 0.99
Range of Reliability (adjusted)	0.69 - 0.99
Average Validity (total) ¹	0.90
Range of Validity (unadjusted)	0.75 - 0.99
Range of Validity (adjusted)	0.75 - 0.99

¹In regard to the total reliability and total validity, there is no difference between the unadjusted and adjusted data.

4.2.2 Testing of Formal Characteristics of the Media Report

VAR	Name of the Variable	Cases	Validity Holsti	Reliability Holsti
V0	Report Identification	- ¹	-	-
V1	Coder's ID Number	-	-	-
V2	Date	720 ² /790 ³	0.99	0.99

V6/V13	Length of the Report ⁵	720/790	0.99	0.99
V7	Placing of the Report ⁴ (newspapers)	400/440	0.98	0.96
V8	Level of Visualization ⁴ (newspapers)	660/720	0.96	0.95
V9	Visualization Rate ⁴ (newspapers)	-	-	-
V10	Type of Visualization ⁴ (newspapers)	660/720	0.97	0.96
V11	Editorial Sections ⁴ (newspapers)	660/720	0.95	0.94
V12/14	Genre (newspapers /TV)	720/790	0.94	0.93

¹ no reliability-and validity scores available, as this variable was generated automatically and was not part of the human coding process

² Number of cases in the reliability test

³ Number of cases in the validity test

⁴ Captured for newspaper reports only

⁵ Length/Size for newspaper reports captured in mm² and in seconds for TV news reports

4.2.3 Testing of Content-Related Characteristics of the Media Report

Generic Frame Indicators

VAR	Name of the Variable	Cases	Validity Holsti	Reliability Holsti
V15	Game Centricism	720/790	0.84	0.78
V16	Contextuality	720/790	0.80	0.72
V17	Dimensionality	720/790	0.80	0.74
V18	Level of Commentation	720/790	0.90	0.82
V19	Dramatization	720/790	0.77	0.71
V20	Perspectivity	720/790	0.78	0.70
V21	Mobilization	720/790	0.86	0.79
V22	Prospectivity	720/790	0.86	0.77
V23	Tonality	720/790	0.87	0.77
V24	Conflict	720/790	0.84	0.76
V25	Competence	720/790	0.81	0.71
V26	Personalization	720/790	0.85	0.79
V27	Privatization	720/790	0.80	0.77

References to the Election

VAR	Name of the Variable	Cases	Validity Holsti	Reliability Holsti
V28	Reference to the Election	720/790	0.96	0.93

References to Opinion Polls

VAR	Name of the Variable	Cases	Validity Holsti	Reliability Holsti
V29	Relevance of References to Opinion Polls	720/790	0.98	0.97
V30	Type of Reference to Opinion Polls	720/790	0.97	0.97

Electoral Odds, Coalition Options and Speculations

VAR	Name of the Variable	Cases	Validity Holsti	Reliability Holsti
V31/33 ¹	Electoral Odds of Parties and Candidates 1-2	1440/158 0	0.92	0.92
V32/34	Evaluation of Electoral Odds 1-2	1440/158 0	0.92	0.91
V35/37	Coalition Options and Speculations 1-2	1440/158 0	0.98	0.97
V36/38	Evaluation of Coalition Options 1-2	1440/158 0	0.96	0.95

¹ Here, validity and reliability testing results of variables coded analogously were not shown separately, but combined. The precondition for this procedure, however, is the fact that reliability and validity scores of every single variable lies above the threshold of 0.70.

Issues of the Report

VAR	Name of the Variable	Cases	Validity Holsti	Reliability Holsti
V39	Main Topic (original)	720/790	0.75	0.66 ¹
V40	Issue Reference (original)	720/790	0.86	0.81
V41	Tonality of the Topic	720/790	0.75	0.69 ¹
V42	Main Topic (aggregated)	720/790	0.81	0.75
V43	Issue Reference (aggregated)	720/790	0.87	0.83

¹ Score lies below the threshold of 0.70. Due to the compression on a higher main topic level, sufficient validity and reliability scores, both for the main topic and for the issue reference, can be achieved. Such an aggregation could not be applied for the tonality of the main topic.

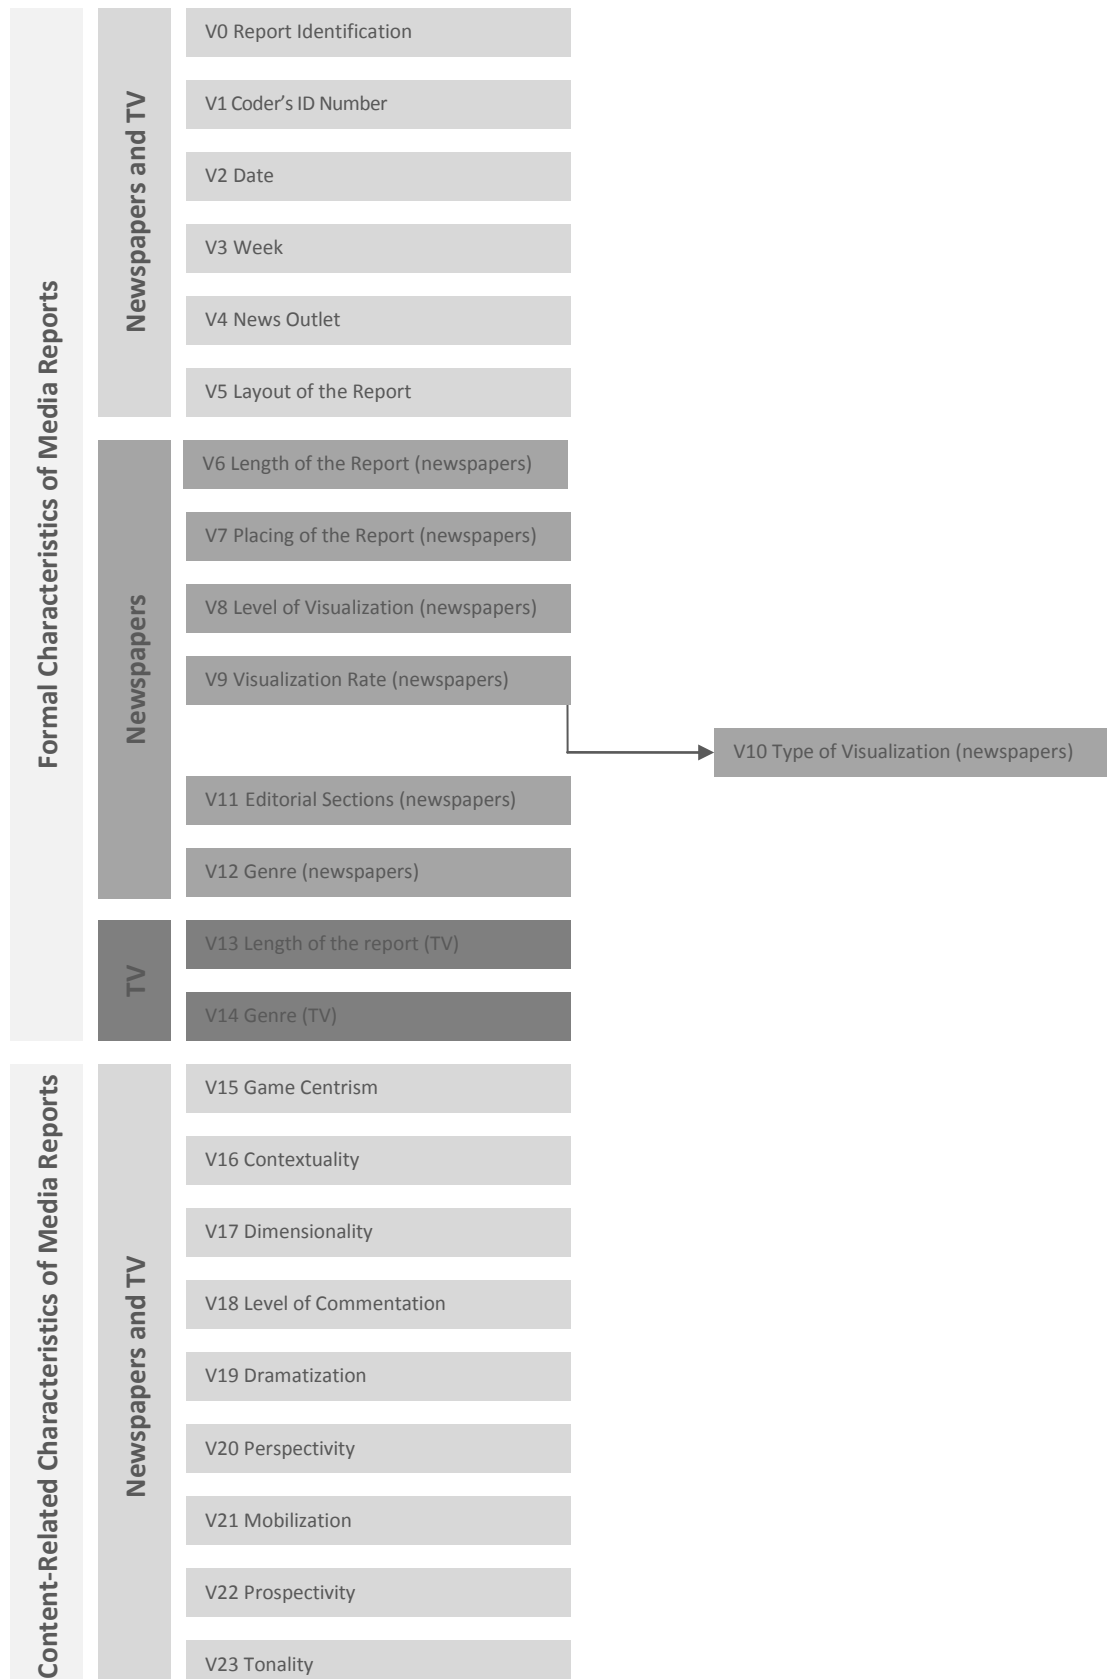

Main Actors 1-5

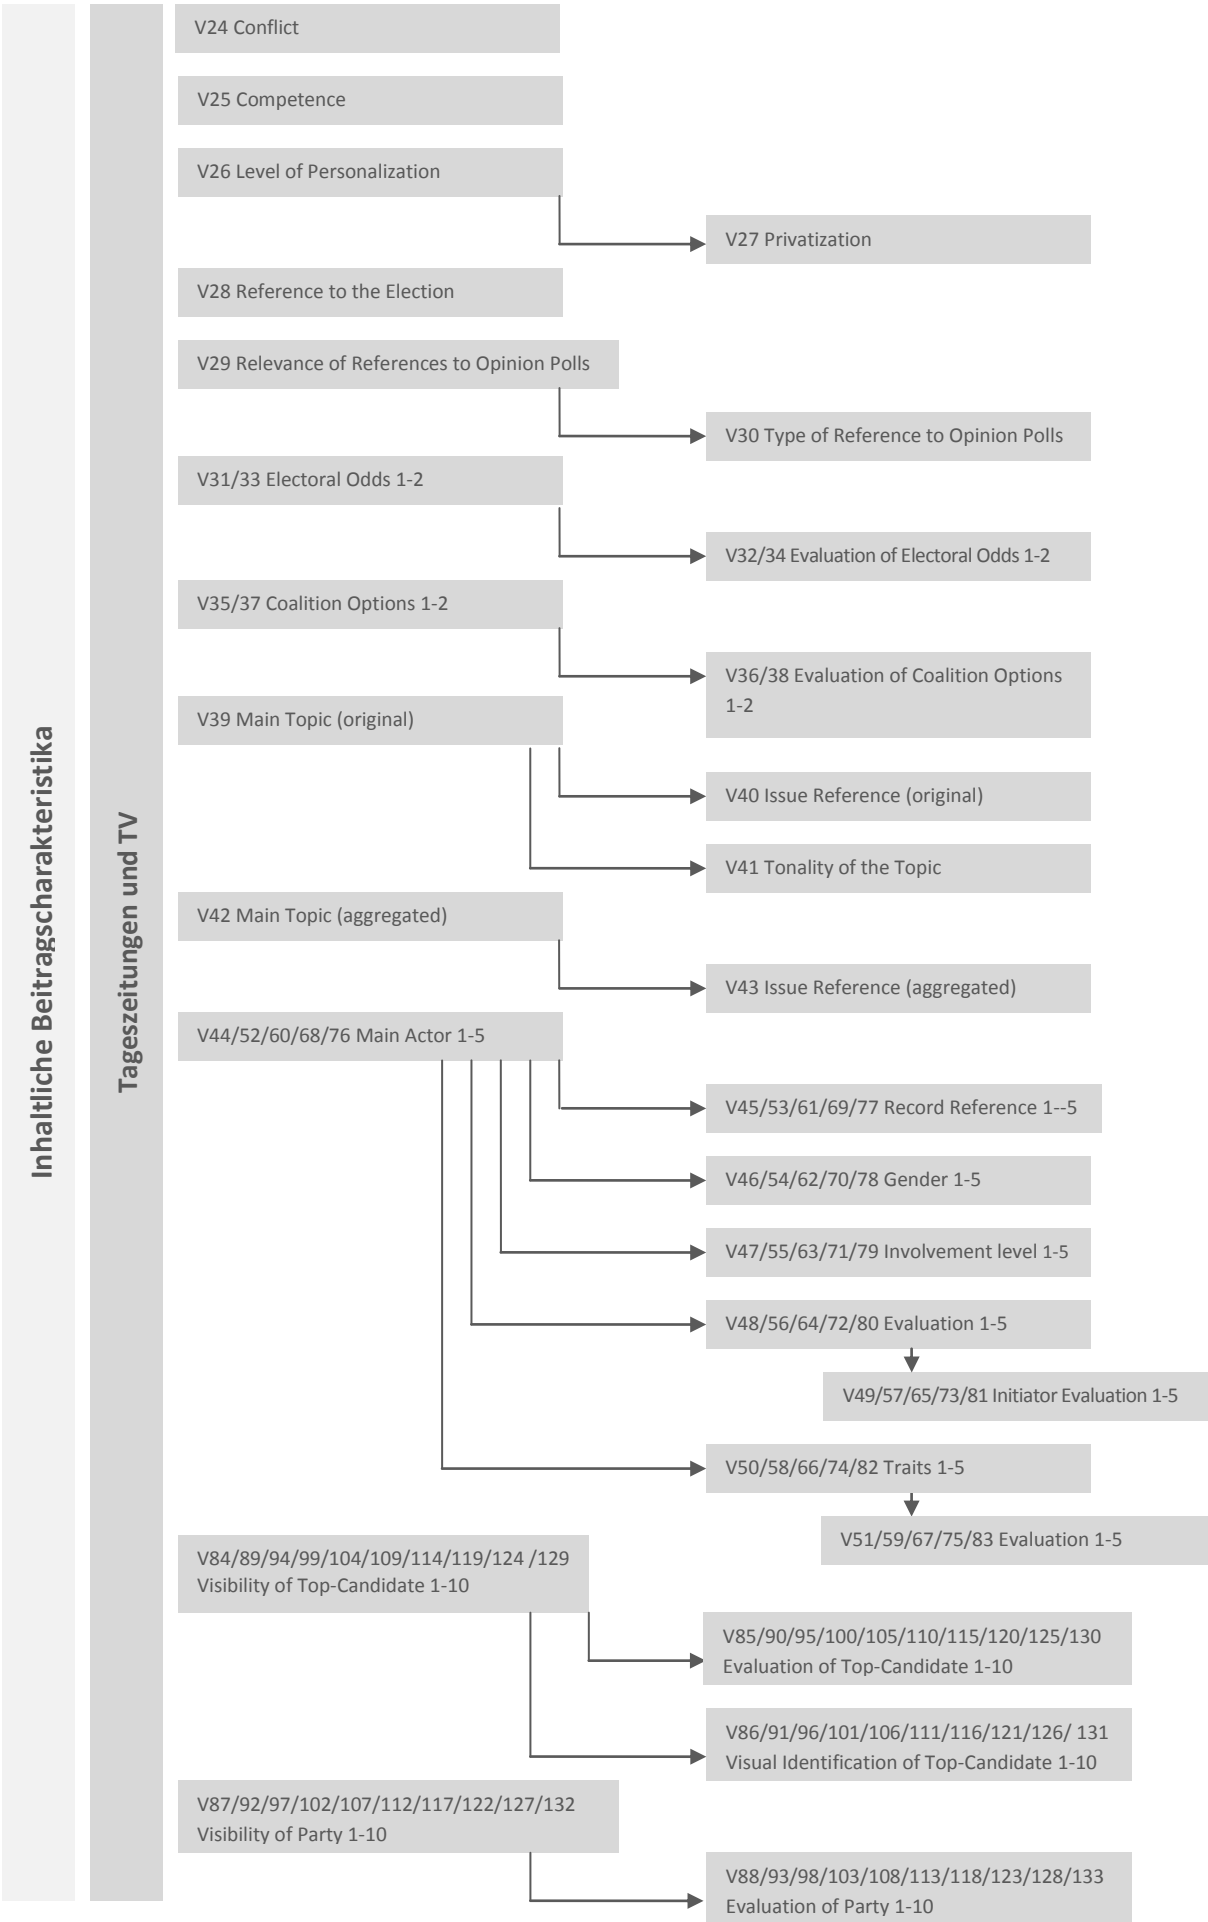

VAR	Name of the Variable	Cases	Validity Holsti	Reliability Holsti
V44/52/60/68/76	Main Actor 1-5	3600/3950	0.85	0.81

Figure 7: Overview of the Variable Structure

6 CODING SCHEME

V0 – REPORT IDENTIFICATION

Automatically generated variable.

Coding Scheme:

Natural number from 1 to 6506

e.g.: 0012

V1 – CODER'S ID NUMBER

Every Coder is ascribed an identification number, which has to be entered at the beginning of the coding process.

Coding Scheme:

- 1 Coder 1: Edina Nozinovic
- 2 Coder 2: Elisabeth Grohsmann
- 3 Coder 3: Franz-Josef Brettermeier
- 4 Coder 4: Juliane Nagiller
- 5 Coder 5: Jürgen Vonbank
- 6 Coder 6: Lea Hetfleisch
- 7 Coder 7: Manuel Innerhofer
- 8 Coder 8: Marlene Lackner
- 9 Coder 9: Mathias Rentzsch
- 10 Coder 10: Matthias Sauermann

V2 – DATE

e.g.: 21.09.2008 (day/month/year)

V3 – WEEK

Automatically generated variable.

- 1 Week 1 (Newspapers 22.09.-28.09.2008; TV newscasts 21.09.-27.09.2008)
- 2 Week 2 (Newspapers 15.09.-21.09.2008; TV newscasts 14.09.-20.09.2008)
- 3 Week 3 (Newspapers 08.09.-14.09.2008; TV newscasts 07.09.-13.09.2008)
- 4 Week 4 (Newspapers 01.09.-07.09.2008; TV newscasts 31.08.-06.09.2008)
- 5 Week 5 (Newspapers 25.08.-31.08.2008; TV newscasts 24.08.-30.08.2008)
- 6 Week 6 (Newspapers 18.08.-24.08.2008; TV newscasts 17.08.-23.08.2008)

V4 – NEWS OUTLET

- 1 Neue Kronen Zeitung
- 2 Kleine Zeitung
- 3 Kurier
- 4 Österreich
- 5 Der Standard
- 6 Die Presse
- 7 Zeit im Bild 19:30 Uhr
- 8 ATV aktuell 19:20 Uhr

V5 – LAYOUT OF THE REPORT

- 0 No lead story
- 1 Lead story

V6 – LENGTH OF THE REPORT (NEWSPAPERS ONLY)

e.g.: 5,412.23 mm² = Code “5412”

V7 – PLACING OF THE REPORT (NEWSPAPERS ONLY)

e.g.: Page 4 = Code “4”

V8 – LEVEL OF VISUALIZATION (NEWSPAPERS ONLY)

e.g.: Overall size of visual elements: 4500 mm² = Code “4500”
No visualization= Code “0”

V9 – VISUALIZATION RATE (NEWSPAPERS ONLY)

Automatically generated variable – share of visual elements of a report (percentage of the total size).

e.g.: Length of the report = 54,312 mm²; Level of visualization = 24,212 mm²; $24,212 \times 100 / 54,312 = 44.58\%$

V10 – TYPE OF VISUALIZATION (NEWSPAPERS ONLY)

- 1 Photos
- 2 Charts and figures
- 3 Caricatures/Caroons
- 4 Drawings and sketches
- 5 Pictograms, symbols, logos
- 6 Excerpts of documents
- 7 Photos of the author
- 8 Other illustrations
- 99 Coding requirements are not met

V11 – EDITORIAL SECTIONS (NEWSPAPERS ONLY)

- 1 Front page
- 2 “Issue of the Day” page
- 3 Politics
- 4 Economy
- 5 Local news
- 6 Editorial, commentary and letter to the editor’s pages
- 7 Culture and communication
- 8 Sports
- 9 Special supplement
- 10 Other section

V12 – GENRE (NEWSPAPERS ONLY)

- 1 Teaser
- 2 Cover headline
- 3 Cover picture with caption
- 4 Cover report
- 5 Cover headline/-report with cover illustration
- 6 News report
- 7 Short news in a compiled overview
- 8 Commentary, column, gloss, editorial
- 9 Interview, discussion
- 10 Cartoon, caricature
- 11 Press commentary, reprinting from other news outlets
- 12 Picture with caption inside the newspaper
- 13 Letter to the editor
- 14 Other genre

V13 – LENGTH OF THE REPORT (TV)

e.g.: 92 seconds = Code “92”

V14 – GENRE (TV)

- 1 Anchor report
- 2 Visualized anchor report
- 3 Film report without original sound bites
- 4 Film report with original sound bites
- 5 Trailer report
- 6 Interview
- 7 Discussion
- 8 Journalistic analysis or commentary
- 9 Other genre

V15 – GAME CENTRISM

- 0 Not applicable
- 1 Rather game-centered
- 2 Balanced/ambivalent
- 3 Rather policy/polity-centered

V16 – CONTEXTUALITY

- 0 Not applicable
- 1 Rather episodic/de-contextualized
- 2 Balanced/ambivalent
- 3 Rather thematic/contextualized

V17 – DIMENSIONALITY

- 0 Not applicable
- 1 Rather one-dimensional
- 2 Balanced/ambivalent
- 3 Rather multi-dimensional

V18 – LEVEL OF COMMENTATION

- 0 Not applicable
- 1 Rather interpretative-commentating
- 2 Balanced/ambivalent
- 3 Rather descriptive

V19 – DRAMATIZATION

- 0 Not applicable
- 1 Rather dramatized
- 2 Balanced/ambivalent
- 3 Rather unemotional/sober

V20 – PERSPECTIVITY

- 0 Not applicable
- 1 Rather retrospective
- 2 Balanced/ambivalent
- 3 Rather prospective

V21 – MOBILIZATION

- 0 Not applicable
- 1 Rather demobilizing
- 2 Balanced/ambivalent
- 3 Rather mobilizing

V22 – PROSPECTIVITY

- 0 Not applicable
- 1 Rather pessimistic
- 2 Balanced/ambivalent
- 3 Rather optimistic

V23 – TONALITY

- 0 Neutral
- 1 Rather negative tonality
- 2 Balanced/ambivalent
- 3 Rather positive tonality

V24 – CONFLICT

- 0 Not applicable
- 1 Rather conflict-centered
- 2 Balanced/ambivalent
- 3 Rather consensus-centered

V25 – COMPETENCE

- 0 Not applicable
- 1 Rather default- and incompetence-centered
- 2 Balanced/ambivalent
- 3 Rather achievement- and competence-centered

V26 – PERSONALIZATION

- 0 Not applicable
- 1 Rather personalized/individualized
- 2 Balanced/ambivalent
- 3 Rather institutionalized/collective

V27 – PRIVATIZATION

- 0 Not applicable
- 1 Rather privatized context
- 2 Balanced/ambivalent
- 3 Rather professional and political context
- 99 Coding requirements are not met

V28 – REFERENCE TO THE ELECTION

- 0 No explicit reference to the “election”
- 1 Explicit reference to the “election”

V29 – RELEVANCE OF REFERENCES TO OPINION POLLS

- 0 No reference to opinion polls
- 1 Minor relevance of opinion polls
- 2 Mid-level relevance of opinion polls
- 3 Central relevance of opinion polls

V30 – TYPE OF REFERENCE TO OPINION POLLS

- 1 Horse race-centered opinion polls
- 2 Topic/issue-centered opinion polls
- 3 Opinion polls centered on forms of electoral behavior
- 4 Election stock markets
- 5 Not representative opinion polls
- 6 Opinion polling in general
- 7 Other references to opinion polls
- 99 Coding requirements are not met

V31/33 – ELECTORAL ODDS OF PARTIES AND CANDIDATES 1-2

- 0 No electoral odds addressed
- 1 Electoral odds of the SPÖ
- 2 Electoral odds of the ÖVP
- 3 Electoral odds of the FPÖ
- 4 Electoral odds of the Greens
- 5 Electoral odds of the BZÖ
- 6 Electoral odds of the other Parties
- 10 Electoral odds of Faymann
- 11 Electoral odds of Molterer
- 12 Electoral odds of Strache
- 13 Electoral odds of Van der Bellen
- 14 Electoral odds of Haider
- 15 Electoral odds of other candidates

V32/34 – EVALUATION OF ELECTORAL ODDS 1-2

- 0 Neutral/no evaluation
- 1 Rather negative evaluation of the electoral odds
- 2 Ambivalent evaluation of the electoral odds
- 3 Rather positive evaluation of the electoral odds
- 99 Coding requirements are not met

V35/37 – COALITION OPTIONS AND SPECULATIONS 1-2

- 0 No coalition options or speculations addressed
- 1 Grand Coalition
- 2 SPÖ-FPÖ
- 3 ÖVP-FPÖ
- 4 SPÖ-Greens
- 5 ÖVP-Greens
- 6 ÖVP-FPÖ-BZÖ

7 Other coalition options or speculations addressed

V36/38 – EVALUATION OF COALITION OPTIONS 1-2

- 0 Neutral
- 1 Rather negative evaluation of the coalition option
- 2 Ambivalent evaluation of the coalition option
- 3 Rather positive evaluation of the coalition option
- 99 Coding requirements are not met

V39 – MAIN TOPIC (ORIGINAL)

The applied, detailed topic categories and their codes can be found in the Topic Catalogue (Appendix A of the Codebook).

Codes 1000-8800

V40 – ISSUE REFERENCE (ORIGINAL)

- 0 No issue reference recognizable
- 1000-4730 Policy issues (policy)
- 5200-6000 Issues of political structure and culture (polity)
- 6500-6640 Electoral issues (polity)
- 99 Coding requirements are not met

V41 – TONALITY OF THE TOPIC

- 0 Neutral/no evaluation
- 1 Rather negative tonality
- 2 Balanced/ambivalent
- 3 Rather positive tonality

V42 – MAIN TOPIC (AGGREGATED)

Here, the main topic and its coding on levels 2 and 3 are aggregated and the categories on level 1 are captured. [Codes see Appendix A]

V43 – ISSUE REFERENCE (AGGREGATED)

- 0 No issue reference recognizable
- 1000-4730 Policy issues (policy)
- 5200-6000 Issues of political structure and culture (polity)
- 6500-6640 Electoral issues (polity)
- 99 Coding requirements are not met

V44/52/60/68/76 – MAIN ACTOR 1-5

- 0 No main actor addressed
- 100 – 7920 Main actors according to Actors' Catalogue (Appendix B of the Codebook)

V45/53/61/69/77 – RECORD REFERENCE 1-5

- 0 No record reference
- 1 Yes, record reference
- 99 Coding requirements are not met

V46/54/62/70/78 – GENDER OF INDIVIDUAL MAIN ACTOR 1-5

- 0 Male
- 1 Female
- 99 Coding requirements are not met

V47/55/63/71/79 – INVOLVEMENT LEVEL OF MAIN ACTOR 1-5

- 0 Not applicable
- 1 Rather active involvement
- 2 Ambivalent
- 3 Rather passive involvement
- 99 Coding requirements are not met

V48/56/64/72/80 – EVALUATION OF MAIN ACTOR 1-5

- 0 Neutral, no evaluation
- 1 Rather negative evaluation
- 2 Balanced/ambivalent
- 3 Rather positive evaluation
- 99 Coding requirements are not met

V49/57/65/73/81 – INITIATOR OF THE EVALUATION OF MAIN ACTOR 1-5

- 0 Initiator of the evaluation not clearly identifiable
- 1 Journalist/Media outlet
- 2 Expert
- 3 The addressed actor him-/herself
- 4 Author of letter to the editor
- 5 SPÖ (Party and party representatives)
- 6 ÖVP (Party and party representatives)
- 7 FPÖ (Party and party representatives)
- 8 Die Grünen (Party and party representatives)
- 9 BZÖ (Party and party representatives)
- 10 Liste Fritz (Party and party representatives)
- 11 Die Christen (Party and party representatives)
- 12 KPÖ (Party and party representatives)
- 13 LIF (Party and party representatives)
- 14 RETTÖ (Party and party representatives)
- 15 Other political actor
- 16 Other initiator
- 99 Coding requirements are not met

V50/58/66/74/82 – TRAITS OF MAIN ACTOR 1-5

- 0 Not applicable
- 1 Expertise
- 2 Leadership
- 3 Character
- 4 Appearance
- 99 Coding requirements are not met

V51/59/67/75/83 – EVALUATION OF TRAITS OF MAIN ACTOR 1-5

- 0 Neutral, no evaluation
- 1 Rather negative evaluation
- 2 Balanced/ambivalent
- 3 Rather positive evaluation
- 99 Coding requirements are not met

V84/89/94/99/104/109/114/119/124/129 – VISIBILITY OF TOP-CANDIDATE 1-10

- 0 Not visible
- 1 Visible

V85/90/95/100/105/110/115/120/125/130 – EVALUATION OF TOP-CANDIDATE 1-10

- 0 Neutral, no evaluation
- 1 Rather negative evaluation
- 2 Balanced/ambivalent
- 3 Rather positive evaluation
- 99 Coding requirements are not met

V86/91/96/101/106/111/116/121/126/131 – VISUAL IDENTIFICATION OF TOP-CANDIDATE 1-10

- 0 Not visually identifiable
- 1 Visually identifiable
- 99 Coding requirements are not met

V87/92/97/102/107/112/117/122/127/132 – VISIBILITY OF PARTY 1-10

- 0 Not visible
- 1 Visible

V88/93/98/103/108/113/118/123/128/133 – EVALUATION OF PARTY 1-10

- 0 Neutral, no evaluation
- 1 Rather negative evaluation
- 2 Balanced/ambivalent
- 3 Rather positive evaluation
- 99 Coding requirements are not met
